

# Maryland

2023-24 Airport Directory

## FOREWORD

- Welcome to Maryland by Air -

Maryland has a rich history in aviation and many firsts have been celebrated in the *Free State*. One way to experience the State of Maryland's heritage is through aviation. As we continue to move forward through the second century of powered flight, the Maryland Aviation Administration (MAA) is pleased to present its biennial Airport Directory. This guide provides information on airport facilities within the State of Maryland including airport data, aerial photographs and noise abatement procedures to help pilots find their way around Maryland's public-use airport system. This guide is also presented as a training tool for students of all ages interested in aviation and Maryland.

Every effort has been made to include the latest and most accurate data available for each and every facility. The information contained in this directory is current as of January 2023, an updated version may be found on our website at [www.marylandregionalaviation.aero](http://www.marylandregionalaviation.aero). We hope this directory will help to make your flying experiences in Maryland safe, enjoyable and memorable. *Due to ever-changing conditions, MAA assumes absolutely **no** responsibility whatsoever for actions taken (by pilots and/or their passengers) based on the information contained within this airport directory.*

We invite you to enjoy Maryland from a unique perspective - from the air.

\*\*\* NOTE: It is the sole responsibility of each pilot to check all sources of information, including the most current Chart Supplement, Notices To Air Missions (NOTAMs) and flight related weather information that may affect your flight, as well as making a visual inspection of any airport facility. \*\*\*

Back Cover: Chesapeake Bay Bridge and Bay Bridge Airport

## Special Acknowledgements

The Maryland Aviation Administration (MAA), Office of Regional Aviation Assistance would like to take this opportunity to recognize the efforts of the Prince George's County Police Department Aviation Section who have offered their professional support to the MAA in compiling this directory.

The Prince George's County Police Department's Aviation Unit supports law enforcement activity as well as homeland security throughout the county. The dedicated officers provide aerial support for routine events as well as emergency activity from search and rescue to direct support of officers on the ground. The Aviation Unit, again this year, assisted with aerial photography of airports in the FRZ and SFRA.

We would also like to thank Ella Scherck for use of her "Fly Into History" artwork on the cover. Mexico Farms Airport celebrates its centennial in 2023.

## TABLE OF CONTENTS

### Introduction Section

iii	Foreword
iv	Acknowledgements
v	Table of Contents
vi	Airport Location Map
vii	Airport Listing (Alphabetical)
viii	Airport Listing (By City)
ix-x	Navigation & Communication Aids
xi	Directory Set-Up

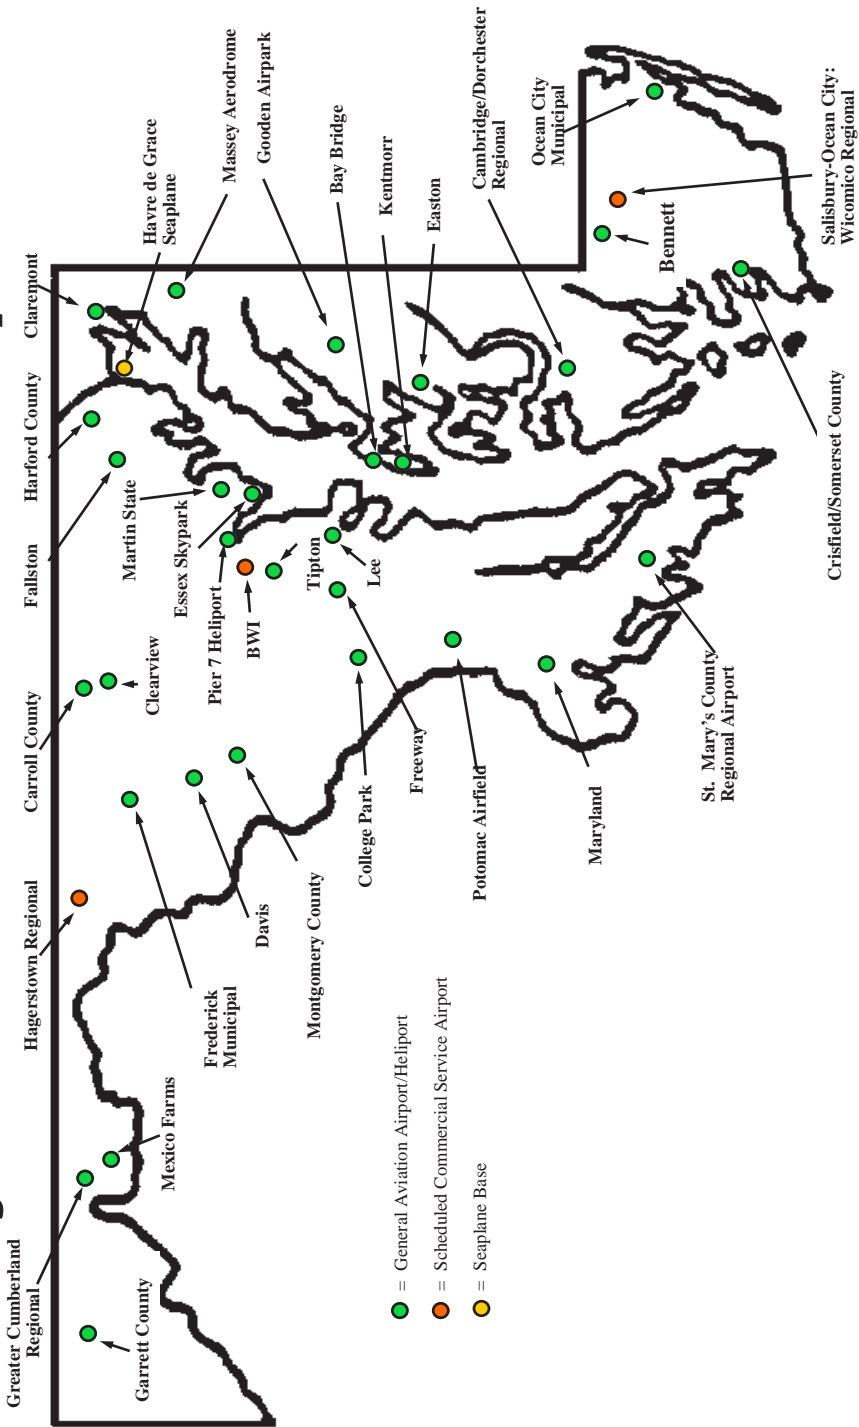

### Airport Section

1 – 68	Individual airport photos, noise abatement procedures, diagrams and airfield data
--------	---

### Appendix Section

"A"	Listing of COMAR waivers issued to Maryland public-use airports
"B"	Listing of internet web addresses for weather information
"C"	Listing of various forms, tools and advisories

# Maryland's Public - Use Airports

- = General Aviation Airport/Heliport
- = Scheduled Commercial Service Airport
- = Seaplane Base

# AIRPORT LISTING

# DIRECTORY SET-UP

The following is an explanation of the design and use of this directory...

## Airport Photo

Helps identify features and terrain and serve as a situational awareness tool.

## Noise Abatement

Recommended procedures to limit noise impact on near by residences. Noise can adversely affect an airport's sound reputation. Please adhere to individual procedures.

## Airport Diagram

Illustrates the airport surface and helps familiarize the pilot with airport situational awareness.

## Airport Data

Provides data on the airport. A brief explanation of data sections are as follows:

- *Lat & Long* format set as "Degrees - Minutes - Seconds"
- *Hours Attended* hours when attended by staff and provides services separate from automated services
- *FBO* list of fixed based operator(s) or other commercial tenant(s) providing services at airport
- *Rmks* provides pertinent airport remarks relevant to safety, airport services, and/or operation

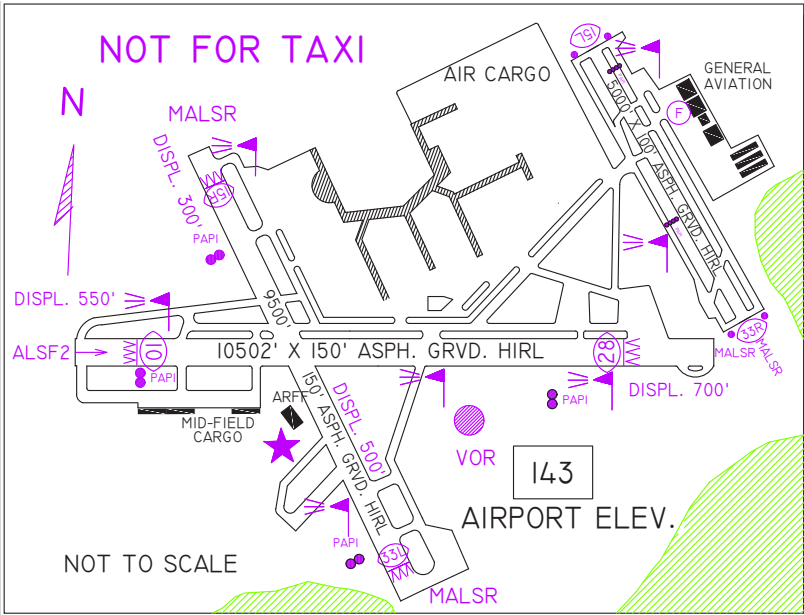

NOTE: Per CFR 91.103 – Become familiar with all available information concerning your flight ( ie: NOTAMs, Weather, Airport Destination Information, A/FD Information, etc. )

## NOISE ABATEMENT PROCEDURES

### Runway 11 Departures:

Turn 10 degrees left when able and follow Route 50 on climb-out;  
Departing aircraft climb to 1000' AMSL prior to turning.

### Runway 29 Departures / Arrivals:

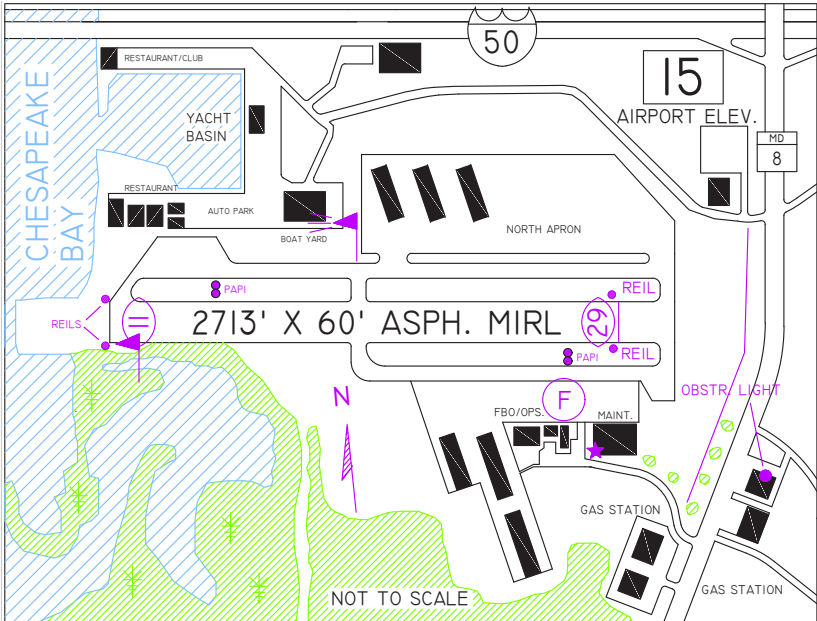

Climb to 700' and 1 mile prior to turning crosswind leg;

Extend crosswind to 1.8 miles prior to turning to the downwind leg, reference water tank for turns;

Maintain 1,200' AMSL while in the airport traffic pattern;

Avoid overflight of Bay City residential neighborhood, south of airport.

**Rotor craft:** Use right pattern for RWY 29. At all other times, use left traffic pattern.

## NOISE ABATEMENT PROCEDURES

### Runway 04

If traffic permits, make a slight left turn after departure to avoid overlying retirement community

### Runway 22

Continue straight out or make a right turn to avoid overflight of the Town of Easton. Departures should avoid overflight of the Town of Easton below 2000 ft.

Aircraft should avoid climbing out over the Town of Easton and residential areas near the airport to the extent possible.

**Waivers to the  
Code of  
Maryland Regulations  
(COMAR)**

**APPENDIX A**

# Waivers to Code of Maryland Regulations (COMAR)

## 58M CLAREMONT AIRPORT

Runway centerline to taxiway centerline distance & runway centerline to building distance (April '90);

## 2W2 CLEARVIEW AIRPARK

Runway length & width, runway centerline to building distance, runway centerline to aircraft parking distance, and runway edge to runway light distance (May '88).

## W48 ESSEX SKYPARK

Runway width (June '88).

## W42 FALLSTON AIRPORT

Runway centerline to taxiway centerline distance, and runway centerline to building distance (June '90).

## W00 FREEWAY AIRPORT

Graded width, separation distance between runway centerline & taxiway centerline, runway centerline & tie-down, runway centerline & building distance (Aug. '89); and Runway 18 approach surface (Dec. '90).

## 3W3 KENTMORR AIRPARK

Runway centerline to building distance, and Runway 10 & 28 approach surfaces (Oct. '90).

## VKX POTOMAC AIRFIELD

Runway 06 & 24 approach surfaces (Mar. '89).

**Aviation Weather  
Information  
on the Web**

**APPENDIX B**

## **Aviation Weather Websites**

The following is a list of useful aviation weather related internet sites. Don't forget to receive a complete weather briefing through official sources as well.

This list is by no means inclusive. Many of these sites provide links to other aspects of a flight that may be of special interest.

This list is provided as a tool in continued efforts to improve dissemination of weather information so that an informed, well structured flight decision may be made.

### **aviationweather.gov**

Provides valuable information on weather from forecasts to current conditions as well as flight precautions. This site also has the Current Icing Potential chart, which is useful for both VFR and IFR flights. Also, the site features links to other useful sites.

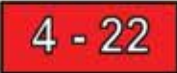

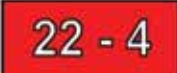

### **1800wxbrief.com**

An online flight planning and briefing tool with weather information and Unmanned Aerial Systems (UAS) Operating Areas.

# **Tools and Advisories**

## BASIC VFR WEATHER MINIMUMS

Airspace Type	Flight Visibility	Distance From Clouds
Class A	Not Applicable	Not Applicable
Class B	3 statute miles	Clear of clouds
Class C	3 statute miles	500 below, 1,000' above, 2,000' horizontal
Class D	3 statute miles	500 below, 1,000' above, 2,000' horizontal
Class E < 10,000' MSL	3 statute miles	500 below, 1,000' above, 2,000' horizontal
= or > 10,000' MSL	5 statute miles	1,000' above & below, 1 SM horizontal
Class G = or < 1,200' AGL	No Requirements	No Requirements
Day, except as provided in FAR Section 91.155 b	1 statute mile	Clear of clouds
Night, except as provided in FAR Section 91.155 b	3 statute miles	500 below, 1,000' above, 2,000' horizontal
More than 1,200' AGL but less than 10,000' MSL	No Requirements	No Requirements
Day	1 statute mile	500 below, 1,000' above, 2,000' horizontal
Night	3 statute miles	500 below, 1,000' above, 2,000' horizontal
More than 1,200' AGL and = or > 10,000' MSL	5 statute miles	1,000' above & below, 1 SM horizontal

EXAMPLE	TYPE OF SIGN	PURPOSE
	Mandatory: Hold position for taxiway/ runway intersection.	Denotes entrance to runway from a taxiway.
	Mandatory: Holding position for runway/runway intersection.	Denotes intersecting runway.
	Mandatory: Holding position for runway approach area.	Denotes area to be protected for aircraft approaching or departing a runway.
	Mandatory: Holding position for ILS critical area/precision obstacle free zone.	Denotes entrance to area to be protected for an ILS signal or approach airspace.
	Mandatory: No entry.	Denotes aircraft entry is prohibited.
	Taxiway Location.	Identifies taxiway on which the aircraft is located.
	Runway Location.	Identifies the runway on which the aircraft is located.
	Runway Safety Area / OFZ and Runway Approach Area Boundary.	Identifies exit boundary for an RSA / OFZ or rwy approach.
	ILS Critical Area/POFZ Boundary.	Identifies ILS critical area exit boundary.
	Direction: Taxiway.	Defines designation/direction of intersecting taxiway(s).
	Runway Exit.	Defines designation/direction of exit taxiways from the rwy.
	Outbound Destination.	Defines directions to take-off runway(s).
	Inbound Destination.	Defines directions to airport destinations for arriving aircraft.
	Information.	Provides procedural or other specialized information.
	Taxiway Ending Marker.	Indicates taxiway does not continue beyond intersection.
	Distance Remaining.	Distance remaining info for take-off/landing.

## TFR, FRZ & the SFRA

As pilot-in-command, you are familiar with many of the acronyms used by the FAA to define terminology as they relate to aviation, specifically flight planning. The acronyms heard most often are TFR, FRZ and SFRA, which have become commonplace in our aviation vocabulary. Below is a brief explanation of the acronyms that require your undivided attention as a pilot while flying in and around the State of Maryland.

Temporary Flight Restrictions, Flight Restriction Zone, and the Special Flight Rules Area are tools used by the Federal Aviation Administration (FAA) to restrict aircraft flight operations within designated airspace. TFRs are used by Air Traffic Control (ATC) as a means of separating “non-participating” aircraft from those engaged in specific aviation business related functions, such as aerial firefighting, medical evacuation and transport and law enforcement. TFRs are also used to restrict aircraft from coming into contact with surface based hazards that could impact the safety of flight. Due to regulatory changes and issues with National Security, TFRs, along with FRZs and the SFRA have been widely implemented throughout the United States by the Federal Government to restrict overflights through specific and security sensitive airspace. In Maryland, this includes the airspace which surrounds Washington D.C.

While TFRs may be prompted at various events, it is important that pilots familiarize themselves with each type of restriction and plan their flight accordingly. Of equal importance, pilots are required to know how to best obtain the most current information concerning TFRs prior to each and every flight. Inadvertent flights into a TFR, as well as the FRZ and/or SFRA not only places a pilot’s airmen certificate at risk for suspension and/or possible permanent revocation, it also increases the chance of being intercepted by Military and/or Law Enforcement aircraft. Drifting into airspace, designated as security sensitive, may also increase the risk of a mid-air collision.

**Pilots are advised to take the DC SFRA online training course at:  
[faasafety.gov](http://faasafety.gov)**

INTERCEPTING SIGNALS and procedures are outlined on the following page. For further information on active TFRs, FRZs, and SFRAs, please visit the FAA’s website at [faa.gov](http://faa.gov). Do your part, as a responsible pilot, and help aid ATC in their on-going efforts to make your flying experience safe, efficient and enjoyable.

## In-Flight Intercept Procedures

### Approach & Identification

Typically two fighter jets approach from the rear. One fighter flies around to make visual contact with the pilot. This may also be conducted with a law enforcement helicopter.

### Fly This Way

A slow turn by a fighter jet indicates that you should follow in the same direction. Be cautious of wake turbulence.

### Breakaway Maneuver

Fighter jets will abruptly break away from pursuit when they understand your intentions.

# **Recreational Use of Unmanned Aircraft Systems Guide to Operators**

MDOT MAA encourages all recreational UAS operators to use **FAA's B4UFLY** App before flying your remote controlled aircraft. B4UFLY is an easy-to-use smart phone app that helps unmanned aircraft operators determine whether there are any restrictions or requirements in effect at the location where they want to fly.

[www.faa.gov/uas/getting\\_started/b4ufly](http://www.faa.gov/uas/getting_started/b4ufly)

Also, don't forget to register your UAS. If your UAS weighs between .55lbs and 55lbs, you need to register it with the FAA.
